

Weed Prevention Plus®

5.4 lb Bag

Effective Against:

Barnyardgrass, Smooth Crabgrass, Curly Dock, Green Foxtail, Black Nightshade, Orchardgrass, Shattercane, Purslane, Woolly Cupgrass, Giant Foxtail, Lambs quarter, Buckhorn, Quackgrass, Velvetleaf, Annual Bluegrass, Dandelions, Creeping Bentgrass, Black Medic, Redroot Pigweed, Catchweed Bedstraw, Clover, and other common garden weeds.

When used as directed, Weed Prevention Plus will not harm beneficial insects, soil organisms, pond, or stream life. There's no waiting, warnings, or worries.

Safe for Children and Pets

Weed Prevention Plus is composed of 100% granulated corn gluten meal. Children and pets can play on the lawn immediately after application.

Safe for Vegetables, Flowers, and Lawns

Since Weed Prevention Plus kills only the root of sprouting seeds, it can be used with confidence around established plants, including transplants, flowerbeds, shrubs, and roses. When your flower or vegetable sprouts have true leaves, it is safe to apply weed prevention plus even up to the day of harvest.

Directions for Use

How to use: Cut above resealable seal and pull apart to open. Dispense across the area to be treated up to 250 sq ft. Reseal for storage.

Garden: Prepare garden bed by turning under or pulling established weeds, then sprinkle around bedding plants, flowers or shrubs. Rake lightly into soil. Weed Prevention Plus works

best if applied, watered in, and allowed to dry for 2-3 days. If excessive rain occurs, reapplication may be necessary. It keeps working 4-6 weeks. Re-apply as needed. Do not apply on newly seeded areas. However, it can be used with confidence around transplants.

Lawn: Spread Weed Prevention Plus evenly over lawn grass by hand or in a spreader. Avoid any bare spots where you are re-seeding. Sprinkle in cracks on sidewalks and driveways. Weed Prevention Plus works best if applied, watered in and allowed to dry for a period of 2-3 days. If excessive rain occurs, reapplication may be necessary.

Application Rate: Apply 5 lb per 250 sq ft (25' x 10') to turf or garden soil. If you choose you can use twice the recommended rate for even better control with no fear of burning our plants.

When to Apply: your first lawn application should be in the early spring, 3-5 weeks before weeds begin to sprout. This is about the time the crocus and daffodils are blooming in your area. Re-apply in late summer when temperatures turn cooler to control late season weeds. Apply to gardens at any time.

Hazards to Humans and Domestic Animals Caution

Possible allergic reaction to inhalation of dust in affected individuals.
