

The Pantry Pest® Trap

Ready to use anywhere! Safe. Non-toxic. Long-lasting. Pesticide-free!
Traps grain moths, flour moths, meal moths, and seed moths.

The Pantry Pest® Trap uses a powerful attractant that has a strong effect on certain moths. It has been used in commercial pest control to trap a variety of moths. These include many different species: Indian meal moths, seed moths, raisin moths, almond moths, tobacco moths.

All of these moths are small and narrow (3/8" to 1/2"). They vary in color from a coppery brown to a mottled gray. These pests are found world-wide around dried goods and foods including: wheat, cornmeal, dried fruits, seeds, crackers, biscuits, nuts, powdered milk, dried pet food, bird seed, chocolate, red peppers, tobacco and cocoa beans.

How to Assemble:

Remove one of the lures from its protective packet.

With circle facing the inside of the trap, insert lure per illustration on trap back.

Trap Placement:

Place the trap near the problem area, generally where dried foodstuffs are stored. Locations include the basement, pantry, kitchen or garage.

Choose a location where the trap will get the most air circulation, but where it will not be damaged by swinging doors or foot traffics.

The moths will find the trap when the trap is placed within 10 feet of the infested food source.

To Remove and Dispose:

The lure should last at least three months. Check trap weekly to determine if it is full or excessively dirty. Discard when full. To discard, wrap trap in newspaper and dispose in household trash.

CAUTION: Keep out of reach of children.
